

Product dating information

Result Determination Date:

The date on which the result in the certificate of analysis (CoA) was determined.

Date of Manufacture

The date of the first filling into primary packaging.

Date of Manufacture QC:

The date of the quality control made in connection with the manufacturing of the lot. The manufacture QC produces the data based on which the lot is released to sales.

Retest Date

The latest date at which a new QC, a retest, will be performed to assure a product's continued compliance with its specifications. The product specification is found in the certificate of analysis (CoA).

Shelf Life

The time period during which a product is expected to remain within the specifications found in its certificate of analysis (CoA), if stored under therein recommended conditions.

Recommendations on how to store our products are found in their respective product literature, such as in their CoA's, and in their product descriptions at <https://biothema.com>
